

Managed Portfolio Service

Risk Profile 6 Portfolio

May 2025

Canaccord
WEALTH

Portfolio characteristics

Launched	September 2015
Target return	Inflation +4.5%
Maximum equity	85%
Estimated yield	1.73%
Recommended investment period	10+ years
ISA eligible	Yes

Costs and charges

All performance figures are shown net of underlying fund charges and net of the MPS Annual Management Charge 'AMC' of 0.50%. Fees charged by any Financial Adviser are not taken into account.

Annual management charge	0.50%
Ongoing charges figure [#]	0.55%
Total	1.05%

Performance

The performance of the Managed Portfolio Service illustrated in this factsheet combines two key periods:

(i) Legacy Track Record – this covers performance from Psigma Investment Management MPS service from inception until 30 June 2022 when it became the Canaccord Wealth MPS service.

(ii) Canaccord Wealth MPS Service from 01 July 2022 onwards.

Investment objective

Our objective for this strategy is to generate a total return equivalent to 80% of the equity benchmark over a minimum rolling period of 10 years. A proportion of the overall return will come from the income generated. The strategy is designed to generate risk adjusted returns over the suggested time horizon. This portfolio is mostly focused on global equity investments, but will also invest in fixed income assets, as well as using other diversifying financial instruments. To assist in the reduction of volatility and deliver uncorrelated returns during periods of unfavourable market conditions, alternative asset classes such as commodities, currencies, infrastructure and hedge funds may be used. Investors in the Risk Profile 6 strategy are prepared to accept a very high proportion of equity risk in pursuit of returns closer to the longer-term returns available from major equity markets. By the same token, at times of stress, the benchmark has generated losses slightly lower than those from major equity markets. The strategy is heavily exposed to equities, which increases the risk of losses that may take some years to recover.

Performance since inception (30/09/2015)

Past performance is not a guide to future performance.

Discrete performance (%)

Total return as at 31/05/2025

Glossary

#Ongoing charges figure: includes costs levied by third party fund managers for the external collective investment schemes we include in the investment portfolio. This figure includes:- Administration costs such as fund expenses and Synthetic costs which are charges levied by the underlying fund managers such as the managers annual management fees.

Annualised volatility: risk is measured by the variability of performance. The higher the standard deviation, the greater the variability (and therefore the risk) of the Fund or the index.

Maximum historic loss: is the maximum loss from peak to trough in an investment's history. The figures are indicative and will depend on circumstance.

Sharpe ratio: measures the risk/return trade-off. It is the annualised return less the average risk-free rate, divided by the annualised volatility of the model.

Portfolio Manager commentary

Equity markets rebounded strongly in May, driven largely by shifts in US trade policy. A temporary but meaningful reduction in tariffs between the US and China marked a clear de-escalation, giving both sides space to seek a more sustainable agreement. Similarly, President Trump's decision to delay a planned 50% tariff on EU imports until July highlighted a pattern of retreat after initial threats. This ongoing behaviour has led to the coining of the 'TACO trade' (Trump Always Chickens Out), as traders increasingly interpret tariff threats as entry points rather than long-term risks.

There is a method to the US administration's apparent volatility. Marko Papić of BCA Research outlines a seven-step "maximum pressure" framework that resembles geopolitical theatre more than conventional diplomacy:

1. **Ask for the moon** – make aggressive, maximalist demands
2. **Whip out your 'big button'** – issue threats and bluster
3. **Punch someone in the mouth** – demonstrate you're prepared to follow through
4. **Break bread** – negotiate and appear magnanimous
5. **Leave the bride at the altar** – walk away at the last moment
6. **Kiss and make up** – resume negotiations
7. **Make a deal** – declare success (until the next round)

So far, the first four steps appear to have played out. Markets have responded positively to reduced tariffs and a more constructive tone, implying optimism that future breakdowns (steps five and six) may be skipped. A court ruling against emergency-imposed tariffs also helped lift sentiment, although the US government is appealing the decision, which may delay but not eliminate future measures.

Consumer confidence rose sharply in May, breaking a four-month decline, driven in part by a reduction in trade tensions and solid corporate earnings. The US equities, which were down 15% just a month ago, have bounced back into positive territory for the year.

However, the recovery hasn't extended to all areas. The US dollar and treasuries have weakened, pointing to net selling of US assets and a reassessment of their traditional safe-haven role. Bond yields continued to rise, not due to inflation concerns, but because of growing unease about fiscal discipline. Moody's downgrade of US sovereign debt—removing the final AAA rating among major agencies—underscored longstanding concerns over unsustainable debt and the absence of a credible fiscal plan. With tax cuts extended and tariff revenues rolled back, there is little offsetting fiscal restraint. Markets may continue to demand higher yields unless a more disciplined approach is restored—raising the risk of a fiscal credibility shock.

Portfolios benefitted from our April decision to increase exposure to underperforming equities. While investor sentiment remains cautious, overall risk appetite is still high, and markets have rewarded selectivity and quality. We have maintained a clear tilt toward defensive sectors and higher-quality assets to help manage volatility and downside risk.

We believe both equity and bond markets are near fair value and continue to favour a neutral overall asset allocation. Encouragingly, the traditional inverse correlation between equities and government bonds has reassured itself. This provides valuable diversification, and we have structured portfolios accordingly to benefit from that dynamic.

In today's environment, positioning must be guided by strong risk management. Our models are not complacent, but balanced and responsive - grounded in strategic thinking and built to weather shifting macroeconomic and political conditions.
