Egis will play a key role in Copenhagen Metro M1 & M2 transformation

Egis is proud to play a central role in the transformation of Copenhagen's Metro Lines M1 and M2, bringing its extensive expertise to support Metroselskabet and the lead contractor on this complex brownfield project.

The project

Led by Metroselskabet, the 3XR project is a key initiative to upgrade and future-proof Copenhagen's M1 and M2 metro lines through the migration to a new, modern signalling system. This complex transformation enhances reliability, capacity, and long-term sustainability of the network. Bringing together a wide range of technical expertise—from CBTC systems integration and civil works to digital engineering, the project reinforces Copenhagen's commitment to delivering world-class, resilient urban mobility.

Egis' missions

With decades of international experience in metro systems and network migration, Egis offers in-depth knowledge of the technical and operational challenges that come with upgrading live transit networks.

The Group' contribution spans the full spectrum of the project—from strategic migration planning, CBTC implementation, GOA4, rolling stock integration, to engineering management, operational transition, and testing and commissioning.

Egis has successfully delivered similar metro upgrades across Europe, ensuring minimal disruption to daily operations while delivering long-term performance improvements. This solid track record is now being leveraged to support Metroselskabet in delivering a modern, efficient, and future-ready metro system for the people of Copenhagen.

Egis is delighted to work alongside its partners COWI and WSP on this ambitious and transformative project.

This milestone reflects the strong collaboration, commitment, and expertise shown throughout this phase.

Mathieu Cremer, Transportation Regional Business Line Director at Egis, comments: "We thank Metroselskabet and our partners COWI and WSP for their trust and are proud to support them in delivering

such a complex and forward-looking metro system. This is our first major contract in the region, marking a key milestone in our ambition to grow our presence here. We bring with us extensive international experience in similar large-scale infrastructure projects, and we look forward to continuing this journey together and shaping the future of mobility in Copenhagen.”

About Egis

IMAGINE. CREATE. ACHIEVE.

a sustainable future

Egis is a leading global architectural, consulting, construction engineering, operations and maintenance services firm. We create and operate intelligent infrastructure and buildings that both respond to the climate emergency and contribute to balanced, sustainable and resilient development.

Our 20,500 employees operate across over 100 countries, deploying their expertise to develop and deliver cutting-edge innovations and solutions for clients. Through the wide range of our activities, we are central to the collective organisation of society and the living environment of citizens all over the world.
