**Guyancourt, France**

## **Egis awarded the project management contract of the Eole project in West of France and positions itself as a leader in the port infrastructure sector dedicated to offshore wind energy in France**

---

**Nantes Saint-Nazaire has awarded Egis and its partner BRLi the project management for the Eole project, a port infrastructure platform dedicated to the assembly of fixed and floating offshore wind turbines. With this new contract, Egis consolidates its position as a major player in the French and European offshore wind energy market and demonstrates the Group's commitment to the energy transition.**

### **A key site for the development of offshore wind energy**

Faced with the imperative of the energy transition at European and national level in a context of growing energy demand, the structures planned as part of the Eole project will serve as an essential base for the deployment of future wind farms off the Atlantic coast from 2030 onwards. In particular, the new infrastructures will enable the assembly of new-generation floating wind turbines (with a capacity of around 25 MW and measuring up to 350m).

Construction is due to start in 2027, so that the first wind turbines can be installed as early as 2030.

As well as contributing to France's energy independence and Europe's efforts to support the transition to a carbon-neutral economy, the project will secure the long-term future of an industry that creates value and jobs in the region.

### **Egis and BRLi's missions**

Backed by their experience in port infrastructure for offshore wind energy, Egis and BRLi will provide a complete project management service, from design studies to construction supervision.

Egis will also be responsible for providing additional support during the consultation phase, geotechnical studies, planning and coordination, as well as the management and development of BIM processes.

The consortium will draw on its multidisciplinary expertise in port infrastructure, maritime civil engineering, offshore wind energy, dredging and pyrotechnic decontamination, foundations, external works and electrification.

## About Egis

---

**IMAGINE. CREATE. ACHIEVE.**  
*a sustainable future*

Egis is an international player active in architecture, consulting, construction engineering and mobility services. We create and operate intelligent infrastructures and buildings that respond to the climate emergency and contribute to more balanced, sustainable and resilient territorial development.

Operating in 100 countries, Egis puts the expertise of its 19,500 employees at the service of its clients and develops cutting-edge innovations accessible to all projects. Through its wide range of activities, Egis is a key player in the collective organisation of society and the living environment of citizens all over the world.
