## **Egis Secures Global ISEP Accreditation**

Egis has secured accreditation by the Institute of Sustainability and Environmental Professionals (ISEP), which recognises the business as an official training centre and validates its own flagship ecodesign course.

This enables Egis' registered trainers to deliver all ISEP programmes, which cover topics ranging from net zero, resource management and biodiversity to environmental foundations, worldwide.

The accreditation comes at a time when countries like the UK are under pressure to establish a healthy balance between biodiversity net gain, climate resilience and major infrastructure delivery, all while remaining on track to reach net zero by 2050.

As an approved training centre, Egis will now help organisations navigate similar challenges, supported by in-house tools such as EVA Climate, a proprietary system for assessing climate risks to infrastructure assets.

Oliver Pike, Europe & Africa ESG and sustainability manager at Egis UK & Ireland, said: "In a world where buildings and infrastructure must be increasingly resilient to climate stresses, the ability to upskill has never been more important.

"Organisations need teams equipped to meet sustainability targets and design and deliver projects built for the future. The ISEP accreditation reflects our commitment to helping businesses embed sustainability into every decision by sharing our approach to project delivery and providing training built on a foundation of engineering expertise.

Egis' own ecodesign course, hosted in collaboration with AXA Climate, comprises 10 modules across seven environmental themes, including carbon, biodiversity and climate resilience.

Completion of modules within the course provides continuing professional development (CPD) credits recognised across the sector.

Earlier this year, a skills-survey of UK engineering and technology employers revealed that 76% struggled to recruit for key roles, with "technical and specialist sustainability skills" topping the list.

Olivier Ledru, Senior Manager – Projects Sustainability Unit at Egis, said: "By becoming an approved training centre, we've built a robust and credible programme that upskills our own teams and supports CPD across the sector. Embedding sustainability into every role is fundamental to ensuring responsible design and project delivery.

"Our approach blends technical expertise with accredited sustainability knowledge to ensure stakeholders can adopt new tools, methods and ways of working that enhance long-term project delivery, resilience and positive impact."

**About Egis:**

Egis is an international player active in architecture, consulting, construction engineering and mobility services. We create and operate intelligent infrastructures and buildings that respond to the climate emergency and contribute to more balanced, sustainable and resilient territorial development.

Operating in 100 countries, Egis puts the expertise of its 22,500 employees at the service of its clients and develops cutting-edge innovations accessible to all projects. Through its wide range of activities, Egis is a key player in the collective organisation of society and the living environment of citizens all over the world.
