- A sunny UK drove output above budget in Foresight Solar’s main market, partially offsetting lower generation in Spain and Australia caused by higher-than-expected curtailment.
- Robust operations and effective hedging contributed to 1.3x dividend cover in 2025, among the highest in the peer group even after debt repayments.
- The UK portfolio’s £0.97m/MW valuation reflects realistic assumptions supported by market evidence, giving the Board confidence in a fair and balanced methodology.
- The Board delivered reduced investment management fees, active buybacks and continued the pursuit of strategic options. Divestment update expected in due course.
