

Investment Objective: Achieving long term capital growth in real terms and steadily increasing income. Our aim is to achieve a higher rate of total return than the FTSE Actuaries All-Share Index Total Return through investing in a diversified portfolio of stocks.

Fund Managers' Comments

In January the Trust's net asset value rose 4.7%, outperforming the FTSE All-Share benchmark which rose 3.1%. It was a positive month for UK equities, led upwards by the miners on the back of strong commodity prices and the defence contractors on the expectation that defence spending among NATO countries will continue to rise. UK corporate activity also started the year early, with a takeover approach for Beazley (which is held in the portfolio) by European peer Zurich.

At the portfolio level, the largest contributors during January included aerospace components supplier Senior and fund manager Schroders, both of which reported encouraging trading updates. More broadly, the Trust benefitted from its holdings in financials such as Lloyds, which continued to perform well, and commodity producers such as Rio Tinto and Anglo American.

The largest individual detractor during January was Flutter Entertainment, which has been impacted by regulatory headwinds in the UK as well as concerns about the pace of growth in the US market. We added to the holding following the de-rating, as in our view the shares represent good value considering the potential for future earnings growth. Dunelm and AB Foods (which owns Primark) were also detractors. In both cases this was due to weaker than expected Christmas trading.

From a transactions perspective, among the largest transactions during the month was the sale of the holding in Reckitt Benckiser, which had performed well since purchase and in our view there are better valuation opportunities elsewhere. A small new position was purchased in UK food producer Greencore. This has recently bought a UK peer (Bakkavor), which we think will allow substantial cost synergies.

Important information

Company specific risks

- This trust is suitable to be used as one component in several in a diversified investment portfolio. Circa 18 per cent. of the net asset value ('NAV') of the trust's portfolio is an investment in an independent professional service company. Investors should consider carefully the proportion of their portfolio invested into this trust.
- Active management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.
- The trust could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the trust.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the trust's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the trust. As a result losses (or gains) may be higher or lower than those of the trust's assets.
- The trust holds an investment in the IPS business which are wholly owned subsidiaries and private shares.
- If a trust's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio diversified across more countries.
- The trust may use gearing as part of its investment strategy. If the trust utilises its ability to gear, the profits and losses incurred by the trust can be greater than those of a trust that does not use gearing.
